Product idea: professional, modern, realistic personal portfolio website to showcase my skills, experience, and qualifications, a multi-page website with fast speed and modern design built with react a multi page website that has contact form with smtp integartion for seamless data come to my email

Product Requirements Document: PortfolioPro - Personal Portfolio Website

Problem Statement

Job seekers in the tech industry often struggle to create a professional, modern, and visually appealing personal portfolio website to showcase their skills, experience, and qualifications. Existing templates are often outdated, lack modern design elements, and fail to provide a seamless user experience across different devices. Additionally, many portfolios lack essential features such as an integrated contact form and SEO optimization, which are crucial for attracting potential employers.

Goals & Success Metrics

Goals

1. **Create a Professional and Modern Design**: Develop a portfolio website that stands out with a clean, modern design and a responsive layout for both mobile and desktop users.

2. **Seamless Contact Integration**: Implement an integrated SMTP contact form to ensure seamless communication with potential employers.

3. **Optimized for Speed and SEO**: Ensure the website loads quickly and is optimized for search engines to improve visibility.

4. **User Feedback**: Gather positive feedback from at least 50% of users within the first three months of launch.

Success Metrics

1. **User Satisfaction**: Achieve a user satisfaction score of at least 4.5 out of 5 based on user surveys.

2. **Loading Time**: Ensure the website loads within 3 seconds on a typical mobile and desktop connection.

3. **SEO Performance**: Achieve a Google PageSpeed score of at least 90 out of 100.

4. **Form Submissions**: Receive at least 50 form submissions from potential employers within the first three months of launch.

User Stories

1. **As a job seeker in tech, I want a professional and modern portfolio website to showcase my skills, experience, and qualifications so that I can stand out to potential employers.**

2. **As a user, I want a responsive design that works well on both mobile and desktop devices so that I can access my portfolio from anywhere.**

3. **As a user, I want an integrated contact form with SMTP integration so that potential employers can easily reach out to me.**

4. **As a user, I want the website to load quickly so that it provides a smooth browsing experience.**

5. **As a user, I want the website to be optimized for search engines so that it is easy to find.**

Functional Requirements

1. **Responsive Design**: The website must be fully responsive, providing an optimal user experience on both mobile and desktop devices.

2. **Home Page**: Include a hero section with a brief introduction, professional photo, and key skills.

3. **About Page**: Provide a detailed biography, including education, work experience, and personal achievements.

4. **Portfolio Page**: Showcase a gallery of projects with descriptions, technologies used, and live links.

5. **Skills Page**: List and categorize skills, including programming languages, tools, and frameworks.

6. **Contact Page**: Include a contact form with fields for name, email, subject, and message. The form should integrate with an SMTP server to send notifications to the user's email.

7. **SEO Optimization**: Optimize meta tags, headings, and content for search engines.

8. **Loading Speed**: Implement lazy loading for images and optimize code to ensure fast loading times.

9. **Security**: Ensure the website is secure by implementing HTTPS and protecting against common web vulnerabilities.

Non-Functional Requirements

1. **Performance**: The website must load within 3 seconds on a typical mobile and desktop connection.

2. **Scalability**: The website should be able to handle an increasing number of users without significant performance degradation.

3. **Reliability**: The website must have an uptime of at least 99.9%.

4. **Accessibility**: The website should comply with WCAG 2.1 Level AA accessibility standards.

5. **Maintainability**: The codebase should be well-organized and documented to facilitate future updates and maintenance.

Open Questions

1. What specific SMTP service will be used for the contact form?

2. How will user feedback be collected and analyzed?

3. What analytics tools will be integrated to track user engagement and SEO performance?
